IEG Journey

Mr. Ajay Choudhary

Started his research on
Internal energy
generation in 1993-1994

1993-1994

2003-2004

He had a breakthrough in
creating a self-charging
generator in 2003. He met
Dr. Abdul Kalam in 2004 and
presented his invention to
him

In 2011-2012 Ajay
Choudhary created his
prototype

2011-2012

2022-2023

Was granted a patent in
2022-23 (With effect
from 2011) for his
invention of Internal
Energy Generation.

PATENT NO. 391051

PATENT NO. 557845

PATENT APPLICATION NO. : - 202631019343

Certificate of Incorporation

[Pursuant to sub-section (2) of section 7 and sub-section (1) of section 8 of the Companies Act, 2013 (18 of 2013) and rule 18 of the Companies (Incorporation) Rules, 2014]

I hereby certify that IEG AUTO POWER LIMITED is incorporated on this THIRTEENTH day of AUGUST TWO THOUSAND TWENTY FIVE under the Companies Act, 2013 (18 of 2013) and that the company is Company limited by shares

The Corporate Identity Number of the company is **U27104MH2025PLC454386**

The Permanent Account Number (PAN) of the company is **AAIC13643Q***

The Tax Deduction and Collection Account Number (TAN) of the company is **MUMI19750D***

Given under my hand at Manesar this THIRTEENTH day of AUGUST TWO THOUSAND TWENTY FIVE

To,
Shri. Ajay Choudhary
Patent No. 391051 on two-wheeler EV, Nagpur -

Subject: Demonstration of patented technology of Internal Energy Generating System- Reg.

Dear Shri Ajay Choudhary,

This is in reference to the subject demonstration done by the team.

We are pleased to see the demonstration and appreciate the efforts and innovation done with regards to the generation of power which is being done internally without any external charging requirement to fuel the vehicle. We truly appreciate the technology and wish you the best of luck in taking it forward to the nation.

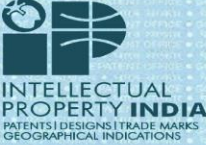

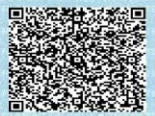

Best Regards,

(Bhimaraya Metri)

Who we are?

Welcome to IEG Auto Power Ltd., where we strive to create a resilient and future-ready energy ecosystem that transforms and elevates millions of lives. IEG Auto Power Limited is an innovation-driven technology enterprise dedicated to advancing energy efficiency in electric applications through engineered power-generation solutions. We excel in developing systems that enhance vehicle energy optimization by converting internally available energy.

Our patented technology — the Internal Energy Generating System developed by **Mr. Ajay Choudhary** — is architected to harness an internal regenerative energy paradigm. We are proud to have a team of dynamic individuals with extensive industry expertise and exceptional potential.

Our portfolio includes patents for our inventions with successful application and validated proof of concept.

IEG Auto Power Limited delivers

next-generation clean-energy solutions engineered for battery-based applications through renewable and resilient energy integration. Our advanced power platforms optimize efficiency, availability, and lifecycle performance across electric mobility and energy-dependent systems. The technology provides a scalable alternative to conventional power generation while strengthening long-term energy resilience.

Vision & Value Proposition

Vision

Transforming global energy infrastructure to enable a resilient, low-impact energy ecosystem for future generations

VALUE PROPOSITION:

We Continuously strive to bring energy with

No
Pollution

Low Carbon
Emission

No Harm to
Mother Nature

Value
Driven

The Problem Statement

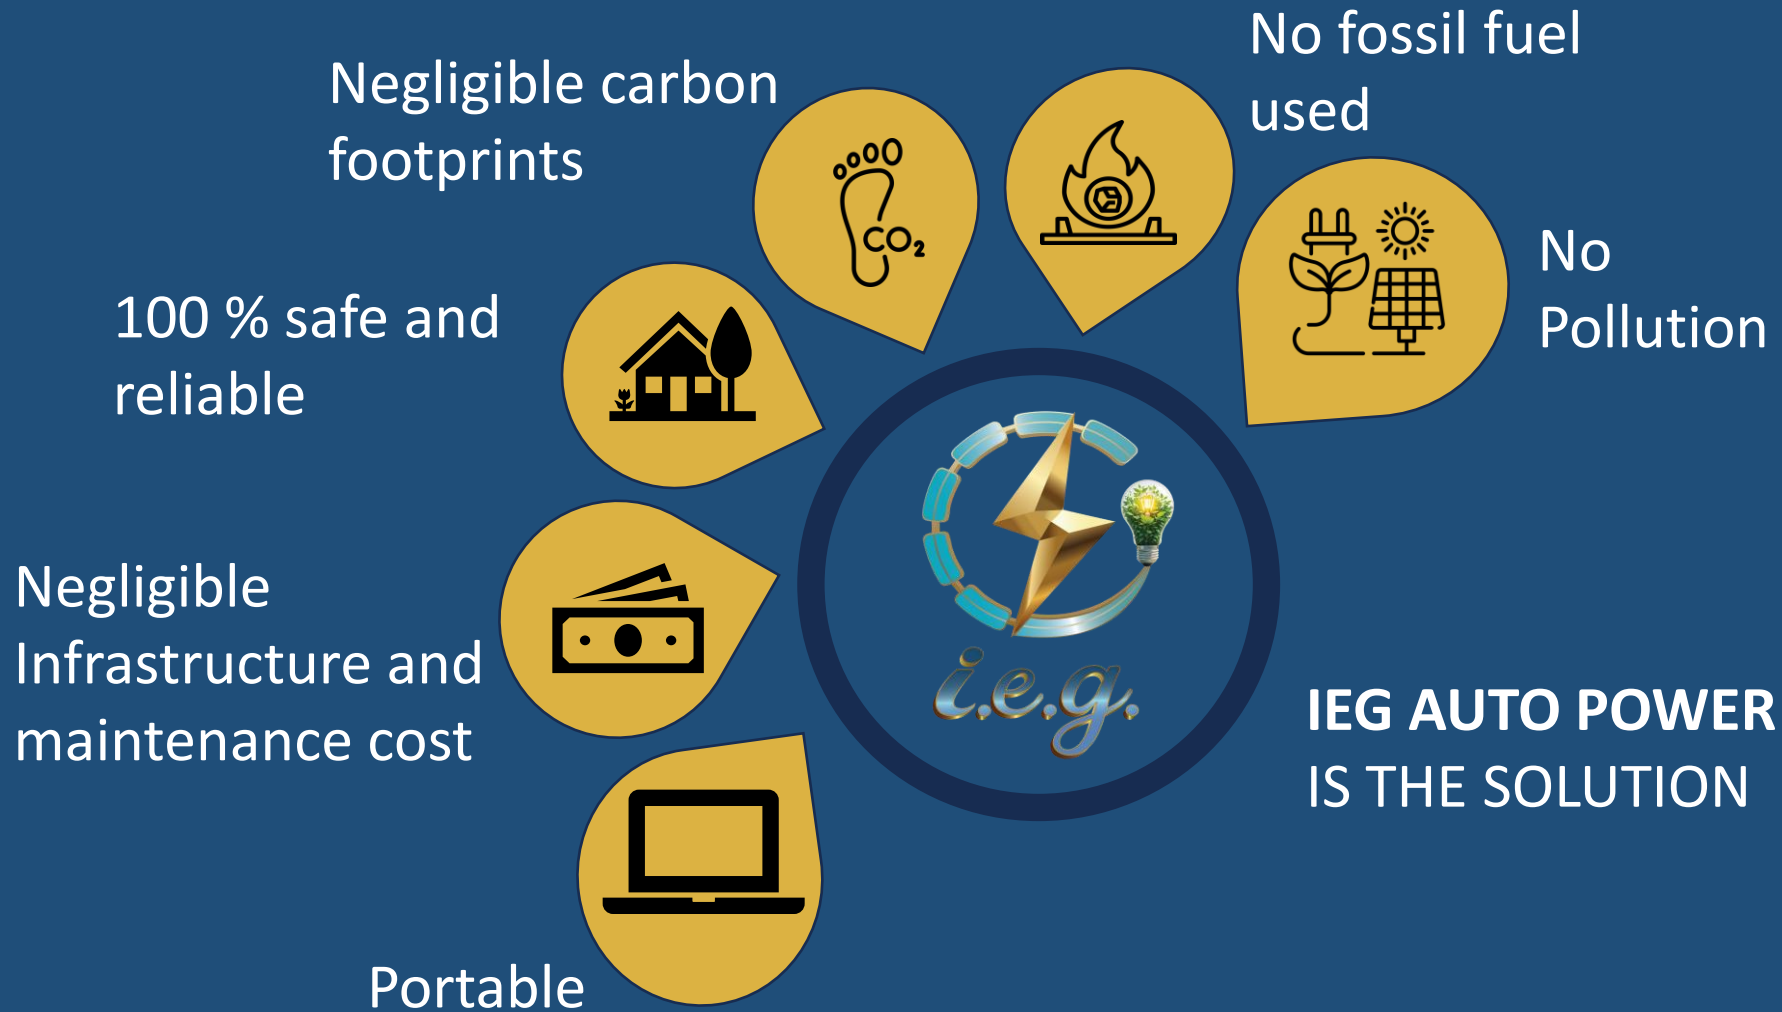

Fossil fuel scarcity due to
extensive need and use.

Exorbitant production
& maintenance cost

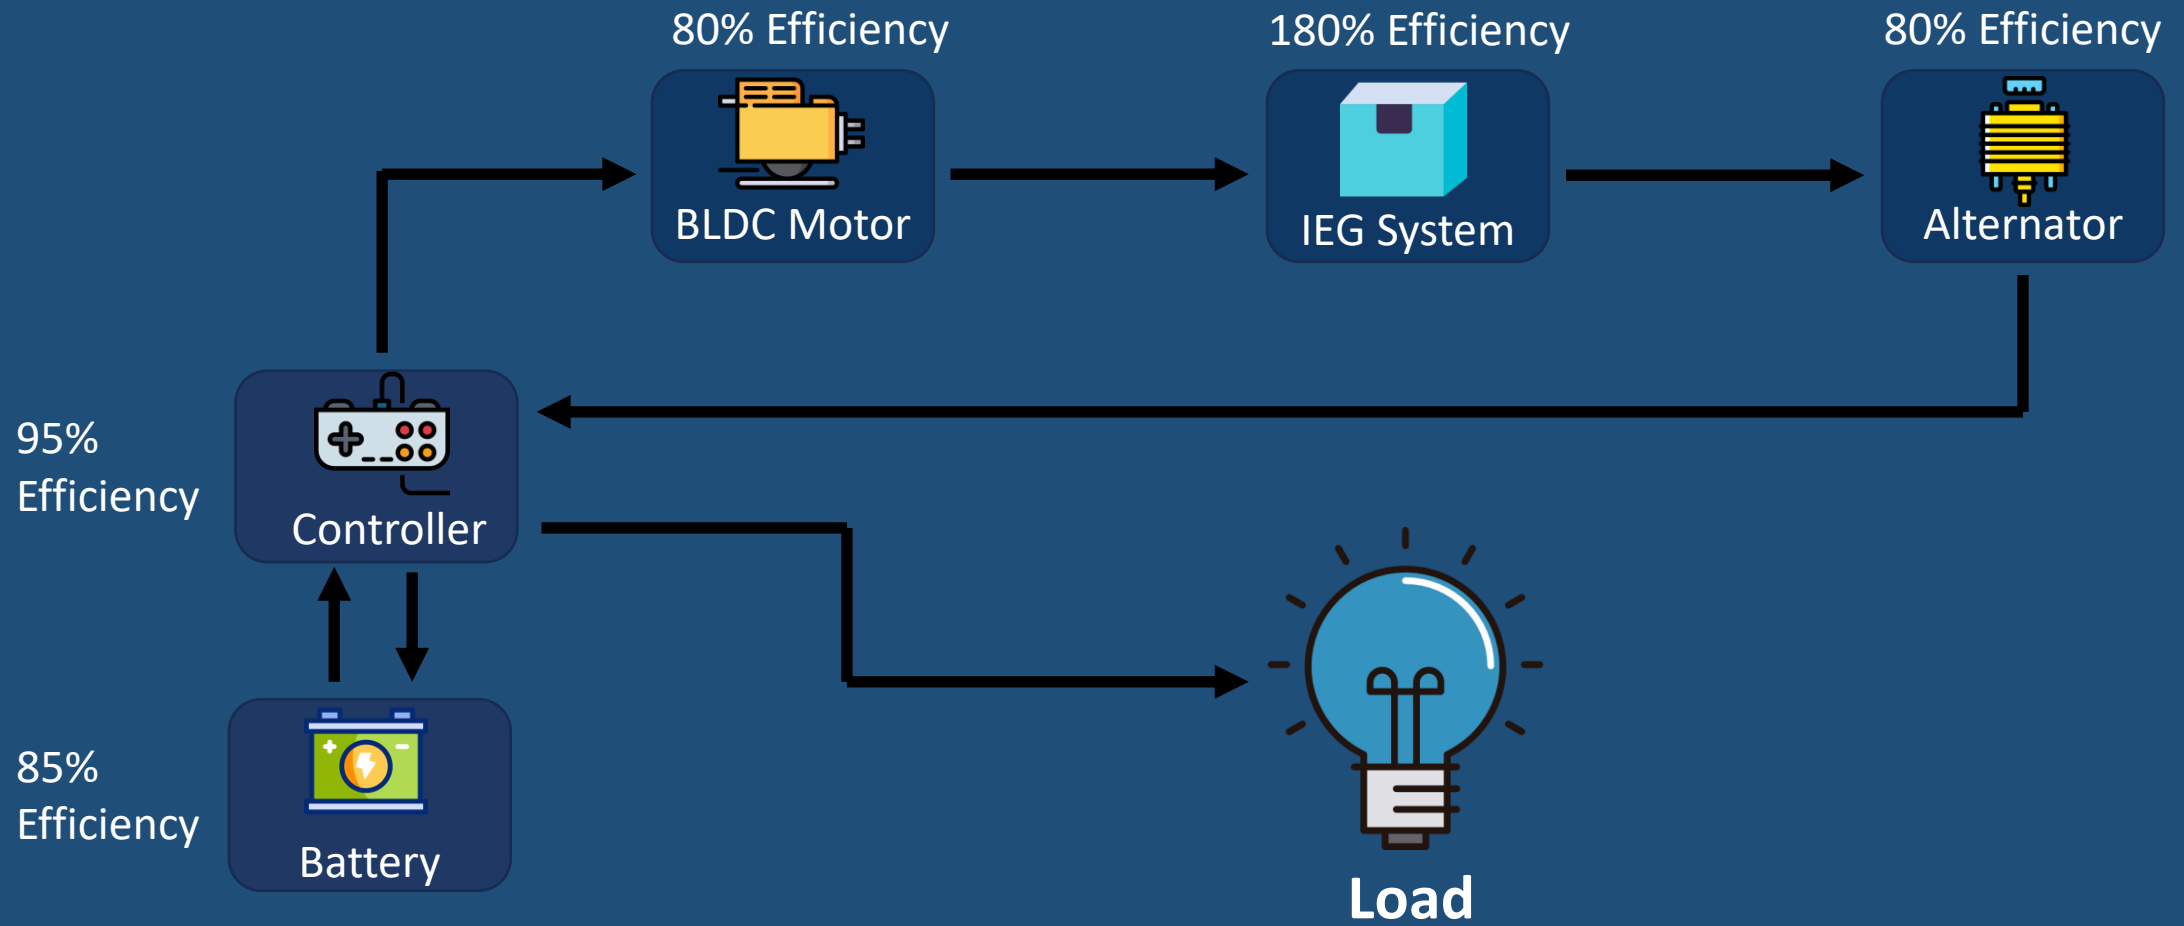

Environmental pollution

The Solution

The IEG Technology - CONCEPT

The IEG Technology – CONCEPT Working

In the concept working of **IEG technology**, the battery is connected to an electronic controller which regulates power delivery to the BLDC motor. The battery operates at approximately 85% efficiency, while the controller transfers power to the motor with about 95% efficiency. The BLDC motor itself functions at around 80% efficiency and converts electrical energy into mechanical rotational energy. This rotational output is mechanically coupled to the IEG system.

Within the IEG system, mechanical energy, electrical energy, and magnetic energy are combined to enhance energy utilization, resulting in an operational efficiency of approximately 180%. This processed energy is then transferred to an alternator. The alternator operates at about 80% efficiency and takes around 80% of the energy from the IEG system to generate electrical power, which is supplied back to the controller. Through this process, a closed loop is formed within the controller. The controller then sends the received alternator power back to the motor to maintain operation, and any remaining energy is provided as usable output.

To understand this with an example:

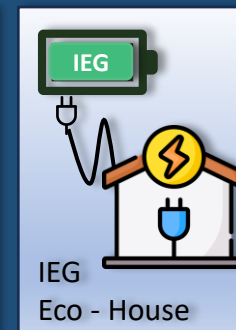

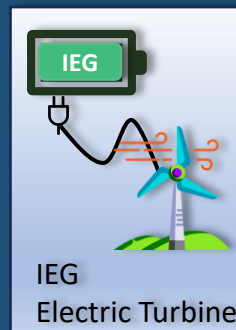

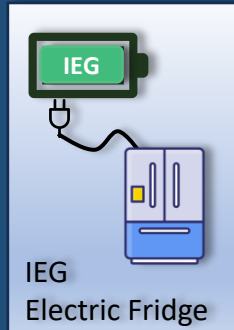

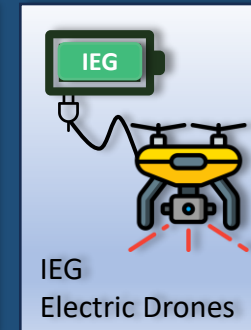

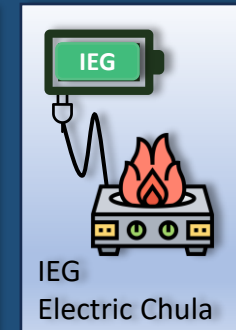

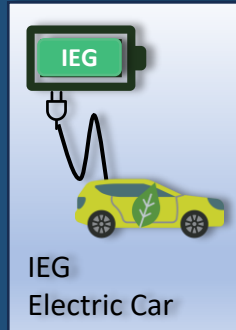

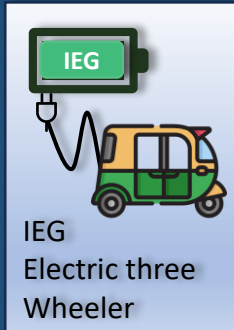

Consider a battery rated at 12V, 10A supplying 2A current to the motor. In this case, the motor receives an electrical input power of 24 watts. This 24-watt output is processed through the IEG system, where due to its 180% operational effectiveness, the power is represented as approximately 49 watts equivalent. About 80% of this 49-watt power is transferred to the alternator, allowing the alternator to operate with around 39 watts. The alternator converts this energy back into electrical form and sends it to the controller. After accounting for the controller's own efficiency of 95%, approximately 38 watts of usable power are available. From this, the controller supplies about 24 watts back to the motor so that the cycle continues running, around 1 watt is directed to the battery, and the remaining 14 watts are available as output power, which can be used to charge the battery, power external loads, or be utilized elsewhere as required.

Industry Applications of IEG Technology

IEG technology can be implemented across most energy-dependent industries, offering a practical alternative to conventional electrical systems.

It requires an Initial capital investment with minimal annual service cost, significantly reducing recurring daily, monthly, and yearly expenses. The system's lifespan is comparable to standard motors and generators, ensuring reliable long-term operation.

Across coal-powered infrastructure and large-scale industrial motor applications, the IEG System enhances high-level operational efficiency and energy performance. B2B clients can monitor real-time performance (voltage, current, output) of IEG systems through the IEG application, ensuring complete transparency and technical validation
